GageCarve® is a primary product of the Gage Vertical Surfacing program. Each sheet of GageCarve is individually crafted of .125”-.160” (3.18–4.06 mm) aluminum using an alloy specific to the anodizing process. **Aluminum is one of the most sustainable materials in the world. It is infinitely recyclable and its re-use is easy and economical. In fact, nearly 75% of all aluminum ever produced since 1888 is still in use today.**

GageCarve is then anodized or powder coated with an interior or exterior grade finish for enhanced appearance, longevity and durability (refer to page 19 for finish definitions and AAMA specifications). Standard orientation for all designs is vertical; however, horizontal patterns can be specified. Product photos may not be to scale (request samples from the factory).

GageCarve currently offers 16 standard designs and 12 standard finishes. Design number and names are shown below the photos. Collaboration on custom designs and finishes is strongly encouraged subject to the parameters of the GageCarve process. Standard sheet size is 48” x 96” (1220 x 2440 mm) or 48” x 120” (1220 x 3050 mm).

GageCarve is available as sheet goods for direct application to the properly prepared substrate. GageCarve can also be specified in conjunction with Gage extrusion system components (System E) which architects and designers have successfully used with GageCast® and GageMetal® (fabrication by the installing contractor, refer to installation diagram in the GageCast technical section of our website, www.gagecorp.net).

GageCarve is appropriate for interior and exterior wall surfacing, feature walls, elevator doors (select patterns), elevator interiors, column covers, millwork accents and many other architectural applications.
Parc 55 Hotel Elevator Cab – San Francisco, CA
C 1003 Ribbon (Nickel)
Gensler - San Francisco, CA
The Museum of Islamic art was designed by renowned architect I.M. Pei, and built on its own island in Doha Bay in the Arabian Gulf. The museum is the result of an Islamic architectural journey of discovery by Pei, at the age of 92. His final inspiration was from a 13th century mosque in Cairo, Egypt which offered an almost Cubist expression of geometric progression and evoked an abstract vision of the key design elements of Islamic architecture.

The galleries, encircling a five story domed atrium, showcase a collection of international masterpieces from Spain to India that spans more than 1,300 years. The romantic cultural icon for Doha, Qatar opened its doors in December of 2008 to guests passing through a long row of palm trees flanking reflecting pools.

As a backdrop for the antiquities, Wilmotte Associates specified a carved metal panel that incorporated one of the design elements used in the facility. The difficulty was the specified material did not exist other than in the creative mind of the Architect.

Consequently, when the specification hit the street, a worldwide search was on for a manufacturer who could produce this material. When the Gage agent in the UAE became aware of the specification, he brought it to the attention of Gage Architectural Products.

Gage is known for creative problem solving and has accepted challenges for custom designs and new product development since its inception in 1988.

The Origin of GageCarve®
Although it took ingenuity, time, and persistence to meet the demanding requirements set forth by Wilmotte Associates, the Gage product submittal was ultimately selected for the Project.

Gage produced the material on time and on budget and is proud to grace the walls of this prestigious museum for visitors throughout time.

After the project was successfully completed, it was only logical that this concept would be the inception for a new product line. In 2007 GageCarve was launched. The inaugural design was named C 1000 Museum in honor of the original design created for the Museum of Islamic Art.

GageCarve has evolved into twelve standard designs and sixteen finishes. Custom designs are also available on request and subject to the parameters of our manufacturing process.

GageCarve has been specified by many of the world’s foremost architectural and design firms in a wide variety of interior and exterior applications including embassies, banks, universities, restaurants, hotels, airlines, sports arenas, and cruise ships (refer to page 17).

In 2014, GageCarve was specified by the Hong Kong office of Gensler for the elevator interiors of the Shanghai Tower, the world’s second tallest building (refer to page 16).

We encourage specifiers to contact us with questions or for samples.

### Key

- **AN** Anodized Finish
- **PC** Powder Coat Finish
- **AAMA** American Architectural Manufacturers Association (meets or exceeds specification listed above.)
- **Delta E** Measurement of the distance in color space between two colors.

### Anodizing

Anodizing is the process used to increase the thickness of the natural oxide layer of the aluminum surface. Anodizing increases corrosion resistance, wear resistance, and surface hardness. In addition, it allows for selective dyeing or coloring, although minor color variation is inherent in the process. We offer a standard selection of anodized finishes. Custom anodized finishes are rarely produced due to the nature of the process. Anodizing is environmentally safe emitting zero volatile organic compounds (VOC).

### Powder Coating

Powder Coating is an electrostatic application of a dry powder that is then cured by heat to form a durable cover skin over the aluminum substrate. Powder coat finishes are more durable than liquid paints with very little color variance. Custom powder coat finishes are offered by Gage in addition to our standard powder coat finishes. Powder coating is also kind to the environment and emits zero VOCs.
Specifying GageCarve® is a simple process. Follow the guidelines listed below. Complete specifications, technical, and installation information can be found at www.gagecorp.net.

Item: Gage Vertical Surfacing (GVS) – GageCarve
Design: Enter specified design, i.e. C 1001 Miami
Finish: Specify required metal finish and associated AAMA specification, i.e. Nickel/AAMA 611
Size: Standard 48” x 96” (1220 x 2440 mm), 48” x 120” (1220 x 3050 mm)
Thickness: .125”-.160” (3.18-4.06 mm)
Weight: 1.5-2.0 lbs/SF (7.32 – 9.76 kg/sm)
System: Adhesive, System E, or by installer
Fire Rating: ASTM E-84: Class A
Note: Contact Gage directly (800-786-4243) for more detailed specification information.

General Comments
1. Standard lead times are typically 6-8 weeks. Contact customer service for expedited production schedules.
2. Quotations for standard products are provided within 24-48 hours of request.
3. GageCarve currently has 16 standard designs and 12 standard finishes. Custom finishes are a specialty of Gage Architectural Products.
4. Custom designs and finishes are encouraged subject to quantity minimums, plus applicable set up and development costs. Allow 2-4 weeks for custom sample development.

Please contact Gage for custom designs or specialty finishes.

Gage Environmental Statement
Leading the way in environmental management, The Gage Corporation International through its affiliate company, Northern Engraving Corporation, was one of the first 10 facilities to earn ISO 14001 Environmental Registration in Wisconsin, Minnesota and Iowa.

One of only six companies to receive the Governor’s Award for Excellence in Hazardous Waste Reduction in 2000, Gage and its affiliate company continually strive to reduce the impact its business has on the environment. Whether it’s using pre-consumer recycled materials in its aluminum products, or pursuing “Superior Environmental Performance” through the signing of a cooperative agreement with the Wisconsin Department of Natural Resources, Gage is committed to a greener planet.
